Java Spring Boot Backend Developer Intern with hands-on experience in building scalable RESTful APIs and secure authentication systems using Spring Boot and Spring Security. Skilled in backend development, debugging, and problem-solving, with experience in designing clean API flows and handling real-world issues in client-server communication. Proficient in MySQL, Spring Data JPA, and Hibernate, with a focus on writing maintainable code, implementing validation and exception handling, and optimizing backend perform

TECHNICAL SKILLS

Languages: Java

Frameworks: Spring Boot, Spring Security

Database: MySQL

Tools: Git, Postman

Concepts: REST APIs, JPA, OOP, Debugging

WORK EXPERIENCE

Java SpringBoot Intern | Incedo, Gurugram 06/2025 – 06/2026

- Developed and maintained RESTful APIs using Spring Boot to enable seamless client-server communication, ensuring structured request/response handling and data consistency
- Designed backend components following layered architecture (Controller, Service, Repository) to improve code maintainability and scalability
- Contributed to microservices-based architecture by building modular services, improving system flexibility and ease of deployment
- Applied core backend concepts such as DTO mapping, input validation, and exception handling to enhance robustness and error management
- Used Postman extensively for API testing, validation, and debugging to ensure reliable endpoint behavior
- Participated in debugging, unit testing, and code reviews, identifying issues and improving overall code quality
- Collaborated with cross-functional teams to integrate backend APIs with frontend systems and optimize application performance

PROJECTS

Login & Signup System (Spring Boot, Spring Security, MySQL) |

- Developed a secure user authentication system using Java and Spring Boot, enabling user signup, login, and password reset functionalities
- Designed and developed RESTful APIs for handling user registration, login, and credential management
- Built a "Forgot Password" feature using email-based verification for secure password recovery
- Applied input validation, exception handling, and structured API responses to enhance system reliability and error management
- Used Postman to test and validate API endpoints, ensuring accurate request-response flow
- Integrated MySQL with Spring Data JPA and Hibernate for efficient data persistence

Employee Record System (CRUD Application).

- Developed a backend-driven Employee Management System using Java, Spring Boot, and MySQL to efficiently manage employee records and operations
- Designed and implemented RESTful APIs for performing CRUD operations, ensuring proper request handling and structured API response
 - Followed layered architecture (Controller, Service, Repository) to maintain clean separation of concerns and improve code maintainability
- Tested and validated API endpoints using Postman to ensure accurate client-server communication and data flow

EDUCATION

Bachelor of Engineering in Computer Science

J.C. Bose University of Science and Technology, YMCA | CGPA: 8.1

08/2012 – 07/2017

CERTIFICATION

- SpringBoot foundations
- Java programing
- Generative Ai for Java
